Medical Report on YAB Tan Sri Muhyideen bin Haji Yassin. Prime Minister Malaysia

As the medical team looking after YAB Tan Sri Muhyideen Yassin , our Prime Minister, we have been very concerned about the irresponsible media reporting regarding his health. This is why, despite patient confidentiality, and with the permission of the Prime Minister, we are issuing the following statement.

1. YAB Tan Sri Muhyideen Yassin has had stage 1a pancreatic cancer which was diagnosed in 2018 and fully treated. He had surgery to remove the tumour followed by a period of intensive chemotherapy that has since been completed almost two years ago.

2. He has had regular follow-ups in Pantai Hospital Kuala Lumpur, Gleneagles Hospital Singapore and the Mayo Clinic, USA. Experts in pancreatic cancer have conducted detailed investigations and have confirmed that there is no evidence of cancer currently and certainly no evidence of recurrent disease.

3. We are of the opinion that YAB Tan Sri Muhyideen Yassin is fit to serve the people and the nation.

As medical professionals we are appalled at the false reporting that has no basis.
